

Introducing Vantage™

INTUITIVE, ONLINE DECISION SUPPORT
FOR THE RIGHTMED® TEST

Using pharmacogenomic test results in patient care can be challenging. Vantage makes it easier.

More than a static report, Vantage is an interactive decision support application that offers easy access to a patient's RightMed Test results, including genetic information and insights on 100+ medications, based on the patient's genetic profile.

THE VANTAGE DIFFERENCE

Available through OneOme's provider portal, Vantage provides patient-specific RightMed results in a way that's intuitive and easy to understand. Providers get the information they need at their fingertips to care for the patient in front of them — without having to scroll through pages of data they don't use.

WITH VANTAGE, PROVIDERS CAN:

-  Review the patient's **current medications** for predicted **gene-drug interactions**.
-  **Search and filter** our database of **100+ medications** for gene-drug information.
-  Access data on **drug-drug interactions** for medications of interest.
-  Research potential **medication alternatives**, based on the patient's results.
-  View patient **gene results**, including genotypes and predicted phenotypes.
-  Reference relevant professional pharmacogenetic **guidelines**.

To learn more or get started, contact your OneOme representative directly or reach out to OneOme support at **+1-844-663-6635** or **support@oneome.com**.
